

Figure 4 (supplementary). Concurrent validity: lexicon vs Qwen harshness
Spearman $\rho = +0.189$, 95% CI [$+0.032$, $+0.341$] (held-out $n=180$)
Diamond = cross-tab mean; the level-1 $\rightarrow$ 2 jump (1.29 $\rightarrow$ 3.14) carries the validity signal.
Level-3 cell ($n=5$) is unstable; the rating scale extends to 5 (very harsh) but
no held-out critique was rated above 3.
